

BEGINNER WALKING AND RUNNING WORKSHOP FOR WOMEN

# First Strides for a Healthy You

Journal Log

## Track Your Progress MINUTES PER WEEK COMPARISON CHART

### How to Use This Chart

This graph will help you track your weekly progress and give you a clear picture of how well you did during the 10-week First Strides program. Above each week, place a dot to indicate how many minutes you walked or ran. (Use the time totals you calculated for each week.) Connect the dots each week to get a clear picture of your progress. An upward line indicates you are doing well.

**Congratulations!** As a member of *First Strides*, you're on your way toward discovering the benefits of walking and running. You already know you don't need a gym membership – you just need good walking or running shoes, time, discipline and guidance. You provide the first three, and First Strides provides the latter through weekly training sessions and this journal, which helps you track your progress and meet your personal goals.

Over the next 10 weeks, you'll discover more energy, meet new walking and running friends, and work toward at least one goal: a 5K (5 kilometers, or 3.1 miles) walk or run. You'll work out with women who have similar abilities and receive encouragement and coaching from First Strides mentors. They offer advice and their personal stories (some started walking and running through First Strides). Guest speakers, including Lehigh Valley Health Network specialists, will teach you safe techniques for walking and running and how to better care for yourself, both physically and mentally. It doesn't matter how old you are – First Strides welcomes women ages 12 through 112 and all athletic abilities. Many First Striders are right off the couch, some describe themselves as “active but not fit,” and a few are joggers looking to improve their training. Participants represent many professions, including teachers, nurses, homemakers, executives, students and retirees. You'll fit right in.

# Track Your Progress

This is your personal walking/running journal. Track your progress to help you meet your personal goals. Start by filling in the appropriate dates on the following pages. There's one page for every week of the First Strides program. Each day, record how long you walked or ran and how far. (Keep in mind, First Strides is based on time, not distance. However, you may want to track distance for your own personal goals.) Remember, stretching is an important part of your workout, along with your 5-minute warm-up and 5-minute cool-down.

At the end of each week, calculate your totals. Use the graph on the back cover to track your progress. Above each week, place a dot to indicate how many minutes you walked or ran. Connect the dots each week to get a clear picture of your progress.

In the "Notes" section of each day, record the weather, how you were feeling while walking or running, with whom you worked out, your personal achievements or challenges – anything you want. This journal is to help you track your workouts and meet your personal First Strides goals.

At [LVHN.org/firststrides](http://LVHN.org/firststrides), find great tips and information about how walking and running benefit your physical and emotional health.

TOTALS		Date	Time	Distance	Notes
M					<p><b>Making Strides Toward Healthy Eating</b></p> <p>Aim to eat 5-9 servings of fruits and vegetables each day, with at least 1 serving per meal (1 serving = 1/4 of your plate). Water helps replace fluids lost during exercise. Drink 2 cups of water two hours before exercising, and 1/2 - 1 cup every 15-20 minutes during your workout. After working out, drink another 2 cups of water.</p> <p>Learn more at <a href="http://LVHN.org/firststrides">LVHN.org/firststrides</a>.</p>

 Track and field champion

Week 2		First Strides Workout Goal: 4 easy; 2 hard; 3 repetitions = 18+ 10* = 28 minutes total. Workouts this week: 3 *5 minute warm-up + 5 minute cool-down				TOTALS
<p>Exercise and Bladder Control</p> <p>Do you lose urine when you exercise, laugh, cough, sneeze or lift heavy objects? If so, you could have stress urinary incontinence (SUI). Don't let this stop you from walking or running - there is help. Talk to your doctor about your symptoms and treatments. A strong pelvic floor prevents "dribbling." Strengthen your pelvic muscles with Kegels. These pelvic floor exercises strengthen the muscles that support the urethra, bladder, uterus and rectum.</p> <p>Learn more at <a href="http://LVHN.org/firststrides">LVHN.org/firststrides</a>.</p>						S

<p>Improve Your Mental Health with Exercise</p> <p>If you're feeling stressed and anxious, exercise. Two minutes of exercise prompts your body to release "feel-good" endorphins. Like meditation, it moves your attention away from your problems and into the present moment.</p> <p>Stay motivated to exercise by doing what you enjoy, finding an exercise buddy, setting reasonable goals and varying your workouts.</p> <p>Learn more at <a href="http://LVHN.org/firststrides">LVHN.org/firststrides</a>.</p>						S
